CHARDONNAY - XAREL·LO - MUSCAT

Description:

Produced from Chardonnay, Xarel-lo and Muscat grape varieties, this #GlassWhite wine is delicate, smooth and perfect to drink at any time of the day or night. Enjoy it on its own or paired with a meal; its lovely notes of white fruits, the delicious scent and a lingering aftertaste will turn any moment from ordinary to special, day or night.

Data Sheet:

Varieties: Chardonnay, Xarel-lo and Muscat.

Origin: Penedès (Barcelona).

Vinification: Prefermentative maceration. Obtention of the flower must by pressing at low pressure. Static must clarification and alcoholic fermentation in a stainless steel tank at a controlled temperature.

Technical Specs:

Alcoholic degree: 11,5% Vol.

pH: 3,13

SO₂: 60 mg/l

Capacity: 250 ml

Total Acidity: 6 g/l

Density: 0,993

Aging: N/A

Tasting Notes:

Visual: Pale golden color with green-shaded rim.

Aroma: Fruity, with a soft vegetable touch.

Palate: Delicate, intense and savory.

MERLOT - TEMPRANILLO

Description

This wonderful blend of Merlot and Tempranillo gives us this rosé wine, smooth and velvety, with a perfect balance in the mouth of fruity and floral aromas, both elegant and persistent. Which fruit does it remind you of? Which flower comes to mind? We already have something to think about or a good conversation starter. Always spectacular with #GlassRosé.

Data Sheet:

Varieties: Merlot, Tempranillo and Cabernet.

Origin: Penedès (Barcelona).

Vinification: Total skidding, cold prefermentative maceration. Obtaining the flower must by bleeding. Static clarification of the must and alcoholic fermentation in a temperature-controlled stainless steel tank.

Technical Specs:

Alcoholic degree: 12% Vol.

pH: 3,55

SO₂: 80 mg/l

Capacity: 250 ml

Total acidity: 5,5 g/l

Density: 0,993

Aging: N/A

Tasting Notes:

Visual: Ruby color with violet-shaded rim.

Aroma: High intensity of berries and citrus.

Palate: Fresh and sweet, pleasant and persistent.

CABERNET - MERLOT

Description:

A red wine full of personality for those that aren't prone being indifferent. The unmistakable notes of red fruits and freshness from the Cabernet and Merlot are sure to improve any moment of your day. What to pair it with? It pairs nicely with whatever you like. Feel free to enjoy #GlassRed with anything, though we recommend good company.

Data Sheet:

Vairieties: Cabernet Sauvignon, Merlot and Tempranillo.

Origin: Penedès (Barcelona).

Vinification: Total skidding, maceration with its skin for four days at low pressure. Alcoholic fermentation with stainless steel tank at controlled temperature and malolactic fermentation with native bacteria.

Technical Specs:

Alcoholic degree: 13,5% Vol.

pH: 3,55

SO₂: 70 mg/l

Capacity: 250 ml

Total acidity: 5,6 g/l

Density: 0,9943

Aging: N/A

Tasting Notes:

Visual: Cherry color with good coating.

Aroma: Essence of berries and spices.

Palate: Intense, warm and pleasant.

CHARDONNAY - XAREL·LO - MUSCAT

Description:

With the best white grape selection we've create this sparkling #GlassBubbles. Aromatic and refreshing, this white wine full of magic bubbles will accompany you in the best moments of your life.

Take your time, things with bubbles seem better, so stop, relax, open a #GlassBubbles and relativize: the most important thing is you!

Data Sheet:

Glass Canned Wines

Safe and Portable

Glass is perfect for the outdoors.

The elegant and light design (40% lighter than glass) of its cans makes it perfect for a hike or a beach day, or even a music festival.

Our cans are resistant, easy to open and you can keep them anywhere without worries for them to break: just put them on the fridge and enjoy!

Easy to Open

Pure freshness flowing with the touch from a can ring. That's how easy is to enjoy a young wine of the year's harvest, just opened. It will never be degassed nor oxidized, like that bottle that we opened some days ago... To enjoy **Glass**, you don't need a cork-screw, so we also avoid the problem of not finding one when we need it!

Also, we will never taste cork, taste due to the tree bark bacteria of TCA.

Always Fresh

Aluminum has a higher thermal conductivity than glass. That means that our wine cans can be cooled quicker than bottles of wine, when you put them in the fridge.

This way, we can save more energy when cooling a can versus a glass bottle. It is also easier to store in the fridge, as it takes less space and you can store them in any corner!

No Aluminum Taste

During several laboratory studies, consumers were made to taste different wines blindly and compare them. None of them could guess which ones were packaged in a can.

Our cans are specially layered and specifically built to contain wine, to avoid oxidation and to prevent of any lost of taste and aroma.

We also work our vineyards from the beginning to make a product that will be canned instead of bottled. We have full control, don't worry!

As a Single Dose

Glass is perfect for relaxing at home after a day at work; don't work extra. We take care of everything.

You won't have to look for the wine opener or to worry about leaving half a bottle in the fridge that might oxidize, with **Glass** you can store different types of wine in and choose what you please when you please.

Our wines take up little space and are easy to open.

Making things easier is our goal!

To Enjoy Together

Now everybody can enjoy their own **Glass**, freshly opened, at the right temperature and without any risk of COVID-19 transmission, as the can will be vacuum sealed from our safe winery.

Besides, there will be no more couples arguing about which wine to get: asking for a glass of red wine and a glass of white wine for the same meal, is already possible.

Night Leisure

All those people that are outing on a night club or a pub and don't wish to drink any hard liquor or beer they will now have an alternative: a refreshing wine!

A wine will have less alcohol degrees than hard liquor and it will be much lighter and elegant than a beer.

We always recommend responsible consumption; that's why our cans are the equivalent of a cup and a half.

Eco-Friendly

Glass aluminum cans are made of 70% recycled aluminum and are 100% recyclable, while clear bottles can only use 23% of recycled glass.

They weight 40% less than glass and they take up less space. This way we reduce CO₂ emissions during transport, reducing the carbon footprint considerably.

We will always do our best to be highly responsible with the environment!

Zero Snobbism

If you are a defender of the old ways and you are not sure about a can being a good container for wine: don't worry, we just put wine inside a can, but wine is wine, and we fully agree that wine is best served in a glass; now and always!

We consider that the can is just another choice. All lovers of wine who will benefit of a can packaged **Glass** wine due to its weight, versatility, size or storage, are welcomed to do so!

There are thousands of moments and we cherish them all!

Great Offer

You can get different kind of wine instead of a single bottle, for the same price.

You will be able to store a wide variety of wines at home instead of just one, and offer them to your guests, depending on their taste.

Have the correct pairing right in hand!

Glass' range of wines will be gradually complemented with new varieties and new packs.

Stay tuned for new updates!

Available Near You!

Our commercial politics is working the on-trade and the off-trade channel, allowing us to be everywhere in the market, and always near you.

The consumers will be able to find us everywhere nearby their homes: a gas station, a supermarket, a gourmet store... Some restaurants are already our clients!

Glass wants to give moments of happiness to everybody, everywhere and at every moment!

100% Customizable

There will always be clients who will want to customize their own can: Wine cellars that wish to can their wine for the first time, supermarkets or restaurants that prefer to have their own brand on the cans...

Our division of consulting has the "know-how" to advise new companies about the canning process and will help to make it possible to create a can with their brand if they wish to, from graphic design, packaging, wine blending and production.

Organic and Sustainable Farming

At **Glass** we are accountable for the way we cultivate our grapes, work the fields and care of our natural environment. Our farmers are committed to the territory and the environment.

We chose a sustainable and environmentally friendly way to produce our grapes, and we make vegan wines. This is not great only for nature and animals, but also for our health.

Soon we will have an organic wine range with the European and CCPAE markings.

Socially Responsible Company

We are proud to be a socially responsible company and fair during all steps of our production:

We take very seriously the gender parity and local economic growth within our production chain: We pay fair prices to our suppliers and fair wages to our partners and workers.

We continuously promote actions to sustain the local bio diversity and to improve the natural environment of the areas we are using to cultivate our grapes.

Glass Donates to Charities Annually

Glass is proud to give back to our world: We are a company of social values. We contribute with a percentage of our annual gains in giving back to different local charities.

As an example, during 2020, we collaborated giving our percentage to La Marató de TV3 to help with the sanitary crisis caused by COVID-19.

Committed with Blockchain Technology

Glass will make the traceability of our product available to its customers. No lies, no surprises.

A QR code will allow the consumer to access the complete product information: geo-locate the vineyards, consult the quality certifications, watch videos of the production process and more.

Glass Canned Wines bets for the future!
